**Subject:** Portland's future generations deserve better

Dear Administrator Gina McCarthy,

The EPA's draft cleanup plan relies heavily on monitored natural recovery, leaving 85% of the lead, PCBs, DDT, mercury, arsenic and other contaminants in the Superfund area. Please significantly revise the plan in the following ways:

1. Select Alternative G with additional dredging in areas of high human use, areas of high ecological value, and areas where there is high risk of recontamination of the river.
2. Set clear timelines and metrics for success
3. Select an alternative that allows all members of our community to eat fish safely from our river, including woman of childbearing age and children.
4. Include heavily contaminated uplands in the plan, as well as the heavily contaminated river.
5. Eliminate the confined disposal facility that essentially creates a permanent toxic waste dump in our river.

Sincerely,

(b) (6)
